Four constraints, and only one of them is a claim a single experiment can refute

	the constraint	what kind of thing it is
P1	constraints on flows, not parameters	**methodological preference**
P2	the environment is written and read by the agents	**a claim about the world**
P3	the primary measure is within-cell	**a claim about the world + a measurement rule**
P4	novelty cannot come from a closed record	**a theorem, with assumptions**
